

ABSTRACT OF THE DISCLOSURE

It is difficult to appropriately select only a favorite image in a list display screen of small images such as a thumb nail image. There is disclosed an image processing apparatus comprising: an indicator for indicating a reduced image to be subjected to a specific image processing among displayed reduced images; a second display controller for displaying an image in a size larger than the size of the reduced image indicated by the indicator; and an executor for executing the specific image processing on the stored image after the second display controller displays the image in the size larger than the size of the reduced image.
